ACKNOWLEDGEMENT

We are all thankful to our teacher that they have given us this opportunity to work on this project.

We are thankful to our mam "ISHRAT PARVEEN" who had encouraged us for this project and to explore views.

We are also thankful to our collage who had given us this platform for delivering our sight in a project manner.

MARCPROSS

ABSTRACT

In this project “THE CONCEPT OF ENCRYPTION AND DECRYPTION WITH DATABASE MANAGEMENT SYSTEM”, for giving the concept of encryption and decryption and how it actually works. In this project we are actually dealing with the database that is to create, manipulate, delete database but all input and output operation from the file is to be done with encryption and decryption technique. This software is not going to use any complex algorithm but for shake of simplicity this is going to use some interesting calculation with the ASCII code of each character.

Hope this will be easiest way for understanding the concept of encryption and decryption.

PAGE NO.

1.INTRODUCTION

1-4

-what is encryption and decryption?

-what is cipher text?

-how it actually works?

~OVERVIEW OF THE PROJECT

2.MODULES OF THE PROJECT

5-6

3.REQUIREMENT SPECIFICATIONS

7-8

-Hardware requirement

-software requirement

-security requirement

-performance requirement

4.SYSTEM ANALYSIS

9-12

-fact finding

-software features

5.DESIGN AND DEVELOPMENT

13-31

-system design

-dataflow diagram

-algorithm

-coding

6.SCREEN SHOTS
